

UGXSMF v0.8.5-beta

Date	10 March 2019
Issues	2 issues
Status	RELEASED
Version	v0.8.5-beta
Version Mode	production ★

Summary

First major update this year. We hope you all had a splendid start into 2019.

Introducing better mobile view for the forum board & message index (+ a few tweaks here and there) and a couple of fixes. Additionally Google+ Sign-In has been replaced with Google Sign-In because of the immediate Google+ shutdown.

Important highlights from this release

- Better mobile view for forum board & message index
- Improved a couple of widgets and elements to be more mobile friendly (including beta banner, button list, breadcrumbs)
- Added label to mobile toggle menus - they are now more obvious (and explain their functionality)
- Added avatar to mobile main navigation menu when logged in
- Account registration with Internet Explorer 11 should work again (but seriously, use another browser asap 😊)
- We patched our software to PHP 7.3 and upgraded our servers as well. This will improve performance even more!
- Added Connections to profile quick list menu (top right in navigation)
- Fixed and improved compatibility with upcoming UGX Play
- Fixed invalid timezone with development version of Firefox (which would soon or later backfire on stable version)
- Fixed http error response code for some pages (legacy system - ugh!)
- Fixed reported bugs and errors
 - Most noteworthy is that images on a forum post can be viewed in an interactive gallery again, instead of each individual in the browser tab on click
- Development
 - Upgraded sentry to new unified php-sdk
 - Upgraded all software dependencies to their latest versions

(Not all changes are listed here, always check the highlights above)

Known issues

- Supported Browsers / Devices
 - Currently only Firefox & Chrome has been heavily test.
 - Internet Explorer 11 & Edge has been partially tested.
 - There was no extensive testing on mobile devices yet
 - **We need your feedback if something isn't working on your device**

Whats next?

We will listen to community feedback as usual ❤️. The focus is now on stability and maintenance for a while.

There will be one feature release before we take a break from forum development. We will introduce reactions on post soon. You'll be able to add emojis / emotes (reactions) to forum posts 😊

More time in the [UGX Launcher](#) and [UGXPLAY](#) will be spent and hopefully some new announcement about it will be made soon.
