

UGXSMF v0.8.6-beta

Date	12 May 2019
Issues	9 issues
Status	RELEASED
Version	v0.8.6-beta
Version Mode	production ★

Summary

This update brings you a brand new major feature, called [UGX Reactions](#).

It is now possible to add emote / emojis on forum messages 😊. Now you can add quick responses to messages like: 👍.

Important highlights from this release

- Added UGX Reactions. You can view the documentation of it here: [UGX Reactions](#) (in short it works similar to other websites / apps)
- Added [BrowserUpdate.org](#) notifications for outdated / insecure browsers
- Improvements
 - Improved registration step 5 (Optional Profile Information) and improved the error and labels for the Website URL and title.
 - Replaced native scrollbars with nicer custom ones for reaction, emote and emoji picker
 - First (of many) improvements for better page loading. (Many scripts will be loaded after page load now)
 - More meaningful errors for users when they try to access a topic which does not exist anymore or is placed in Land of Spam.
 - Improved service worker update and caching - you should have a better experience now (faster page loads) and a better update process.
 - Improved CKEditor usability with quotes. Forum quotes are readonly now and it's easier to add a new line above or below a quote only text.
 - Offline page (if there is no internet connection available) will show a reload button and tries to reload itself on connection again
 - Changed visual style of login and register buttons of 3rd party providers
- Fixes
 - Fixed over 20 reported errors (through automated reporting by sentry)
- Development Improvements
 - Heavily improved deployment with automation script and also automated an dependency upgrade.

[9 issues](#)

(Not all changes are listed here, always check the highlights above)

Known issues

- Supported Browsers / Devices
 - Currently only Firefox & Chrome has been heavily test.
 - Internet Explorer 11 & Edge has been partially tested.
 - There was no extensive testing on mobile devices yet
 - **We need your feedback if something isn't working on your device**

Whats next?

We will listen to community feedback as usual ❤️. The focus is now on stability and maintenance for a while.

The next major release (9.x) will be all about performance and loading speed improvements. This will take some time.

More time ion the [UGX Launcher](#) and [UGXPLAY](#) will be spent and hopefully some new announcement about it will be made soon.
