BO3 | GSC Syntax package for Sublime Text 3

Thanks to the Treyarch PC development team we now have our own GSC syntax for Sublime Text 3! Another thing is that it is fairly easy to install.

> ⚠ **Make sure that you installed the BO3 modtools and that they are up-to-date! This ensures that you are installing the latest version!**

> **NOTE**: Before reading this guide, determine where your Black Ops 3 root directory is located.
>
> **Non-Steam Install**: C:\Program Files (x86)\Activision\Call of Duty Black Ops III\
>
> **Steam Install**: C:\Program Files (x86)\Steam\steamapps\common\Call of Duty Black Ops III\
>
> For the rest of this guide, it will be assumed that the word "root" refers to the appropriate installation path shown above.
>
> Say 'Yes to all' if Windows asks you about replacing files when dragging files into your root directory.

Features

The GSC package contains some useful tools to make BO3 scripting easier and more convenient.

Some of these functions are:

- Auto-complete
- Syntax highlighting
- Function suggestions

Installing the package

This package is located in **root/docs_modtools.**

Here you will find a zip-file named "gsc_sublime.zip". Once located you will want to extract the files contents into a folder called GSC / What ever you want. This part is not that important but the contents of that ".zip" must go into a folder. Now copy that folder you have created (the folder & its contents are now saved into your clipboard).

Next navigate to your Sublime Text 3 root directory. This can be done easily by launching Sublime Text 3, going to "*Preferences*" (Top bar) and clicking on "*Browse Packages*". Your packages folder will now open. Paste your folder in there. You're done!

Now you can restart Sublime Text (if it was still open) and in the bottom right you should be able to select GSC from the list!
