

# UGX Launcher (Legacy)

## Welcome to the UGX Launcher Documentation

The **UGX Launcher** is the replacement of the successful **UGX Map Manager**.

With more [Features and improvements](#), it will be soon or later a worthy successor.

---

### Download & Installation

See [Getting started](#) for download and install instructions.

You most likely want to read [How to install the UGX Launcher \(legacy\)](#) and [How to use the UGX Launcher \(legacy\)](#) which describes in detail the functionality of the applications.

Because the UGX Launcher is still in development, you might want to take a look at [Known Issues and limitations](#) as well. (Especially if you think you found a BUG / Issue !)

If you want to help out and improve the application, take a look at [Community Contributions](#). (We could really need your help!)
