20 issues

Testing

This release introduced a couple of new features / additions, which need to be well tested to ensure it works with the rest of the application.

- **Please test all windows again, major changes might broke something**
- Please test the notification framework

In general, QA I need you to break the application.

Known issues

Tray Notifications will show up although the window is active. **This is inteded for beta and will be disabled soon**

Whats next?

Final testing and the we have **Closed Beta** state!
