

UGXL Installer

Download

The latest version of the UGXL Installer is

Only for Closed Beta Users

This download is currently only for closed beta users!

[>> Available Here <<](#)

What is it?

The **UGXL Installer** is an application which will install the [UGX Launcher](#) and register the application in windows.

So, to get the [UGX Launcher](#), you need this application.

What does it do?

It will download the latest version and then extract it either to the default Installation path, or your self defined, custom path.

It will install all necessary files to start the [UGX Launcher](#).

It will also

- register the application to the Programs & Features of Windows.
- register the `ugxl://` URL scheme. This is needed so you can open the [UGX Launcher](#) through your web browser for example.
- (optional) register to the autostart list, so once you boot up your system, the [UGX Launcher](#) will start as well.
- (optional) a shortcut to execute the [UGX Launcher](#)
- [Runtime Check](#)
- [Security Applications check](#)
- [Firewall Whitelisting](#)
- [Online Check](#)
