

# Install

Installing the UGX Launcher is extremely easy.

## Please report issues

If you notice that something is wrong, or you found a bug please report it.

Take a look at [Community Contributions](#) and it's sub page [How to report a BUG or Feedback](#)

## Manual Upgrade

### IF YOU RECEIVED A MESSAGE THAT SAYS THE AUTO INSTALLER CANNOT UPDATE UGX LAUNCHER:

The latest update to the UGX Launcher broke the auto-updater. You need to perform the update manually by following these steps:

- [Download](#) and start the UGX Installer as described below.
- Choose **Uninstall UGX Launcher** and hit next. (**Be sure that the UGX Launcher is not running while you do this!**)
- **Remove your settings as well!**
- Now execute the UGX Installer **again** and install it as usual. (follow guide below)

We apologize for this inconvenience.

## On this page:

- [Installing the UGX Launcher is extremely easy.](#)

  - [Welcome](#)
  - [Agreement](#)
  - [Verification](#)
  - [Install Type](#)
  - [Custom Install Options](#)
  - [Confirm](#)
  - [Installation](#)
  - [Finish](#)
- [After the Installation](#)
- [Further Information & Troubleshooting](#)

Simply download the [latest version of the UGX Installer](#) and run it.

Just follow the Install Wizard and if everything succeeds the UGX Launcher is properly installed and can be started.

## Install instructions step-by-step

### Welcome

Open the [UGX Installer](#) after you downloaded it and select your Installation Language.

### Agreement

Accept the Agreement by **first scrolling down to the bottom of the document** and then checking the accept checkbox.

(The online version can be found here: [Terms of Service](#) and [Privacy Policy](#) in the [Legal](#) section)

## Verification

Verification will validate if your PC can install the [UGX Launcher](#).

It will do a [Security Applications check](#), to ensure the best experience for you.

The online check is required, because the UGXL Installer will download the latest version of the [UGX Launcher](#).

The last step, [Runtime Check](#), will make sure that the needed dependencies are installed.

If you don't have, as in the image above, a green online / success message

- Check your internet connection
- Check if [www.ugx-mods.com](http://www.ugx-mods.com) can be opened
- If both points above work - it could be in maintenance mode ( no downloads allowed )
  - Check [www.ugx-mods.com](http://www.ugx-mods.com) for any announcements
  - Check [play.ugx-mods.com](http://play.ugx-mods.com) ( not available yet ) for the server status

## Install Type

Select your preferred install type.

If you choose "Custom installation" you get some more options before the installation process starts.

## Custom Install Options

( on this image you can see the parent error, mentioned above ( red warning text ) )

Select a directory, or use the default one, it should look like this then

If you install the **UGX Launcher** for **all users** every user will have the settings applied.

You can enable / disable the **Start Menu Entry**. UGX-Mods recommends to keep this option checked (= create **Start Menu Entry**)

## Confirm

Confirm will show you what you selected

Now download it...

## Installation

The files will be now extracted to the install directory

after installation, we run a firewall check and ask for [Firewall Whitelisting](#) to improve your experience.

## Finish

## After the Installation

After installation, if you execute the UGX Launcher Installer again, it will recognize the installation and offer [Uninstall](#) and [Modify](#).
