

# Security Applications check

The UGX Launcher checks for running Antivirus / Anti-Spyware and Firewalls.

**\*We check for these applications to ensure the best experience for you. Sometimes they create compatibility issues.\***

The screenshot shows a dark-themed interface for a security check. At the top left, there is a green checkmark icon followed by the text "Antivirus & Firewall check (experimental)". To the right of this text is a blue link "Why do we check this?" with an external link icon. Below this, there are two rows of information. The first row is "Antivirus / Antisypware: 3 found [?]" with a corresponding green button that says "No known issues found.". The second row is "Firewall: 1 found [?]" with a corresponding green button that says "No known issues found.".

In the past we had many users who reported issues.

To help you prevent these issues, we check for such applications and if we know any issues with them, we will link you to the help section to fix the issues fast.

Please note, we therefore are required to check the application name and type on our server.

We will collect and store this data anonymously and without any connections to you.

For more information, check out our [Privacy Policy](#) in the [Legal](#) section.
